Introduction to the Reserve Analysis -

The elected officials of this association made a wise decision to invest in a Reserve Analysis to get a better understanding of the status of the Reserve funds. This Analysis will be a valuable tool to assist the Board of Directors in making the decision to which the dues are derived. Typically, the Reserve contribution makes up 15% - 40% of the association's total budget. Therefore, Reserves is considered to be a significant part of the overall monthly association payment.

Every association conducts its business within a budget. There are typically two main parts to this budget, Operating and Reserves. The Operating budget includes all expenses that are fixed on an annual basis. These would include management fees, maintenance fees, utilities, etc. The Reserves is primarily made up of Capital Replacement items such as asphalt, roofing, fencing, mechanical equipment, etc., that <u>do not</u> normally occur on an annual basis.

The Reserve Analysis is also broken down into two different parts, the Physical Analysis and the Financial Analysis. The Physical Analysis is information regarding the physical status and replacement cost of major common area components that the association is responsible to maintain. It is important to understand that while the Component Inventory will remain relatively "stable" from year to year, the Condition Assessment and Life/Valuation Estimates will most likely vary from year to year. You can find this information in the **Asset Inventory Section** (Section 2) of this Reserve Analysis. The **Financial Analysis Section** is the evaluation of the association's Reserve balance, income, and expenses. This is made up of a finding of the clients current Reserve Fund Status (measured as Percent Funded) and a recommendation for an appropriate Reserve Allocation rate (also known as the Funding Plan). You can find this information in Section 3 (pages 1 – 13) of this Reserve Analysis.

The purpose of this Reserve Analysis is to provide an educated estimate as to what the Reserve Allocation needs to be. The detailed schedules will serve as an advanced warning that major projects will need to be addressed in the future. This will allow the Board of Directors to have ample timing to obtain competitive estimates and bids that will result in cost savings to the individual homeowners. This will also ensure the physical well being of the property and ultimately enhance each owner's investment, while limiting the possibility of unexpected major projects that may lead to Special Assessments.

It is important for the client, homeowners, and potential future homeowners to understand that the information contained in this analysis is based on estimates and assumptions gathered from various sources. Estimated life expectancies and cycles are based upon conditions that were readily visible and accessible at time of the observation. No destructive or intrusive methods (such as entering the walls to inspect the condition of electrical wiring, plumbing lines, and telephone wires) were performed. In addition, environmental hazards (such as lead paint, asbestos, radon, etc.), construction defects, and acts of nature have not been investigated in the preparation of this report. If problem areas were revealed, a reasonable effort has been made to include these items within the report. While every effort has been made to ensure accurate results, this report reflects the judgment of Aspen Reserve Specialties and should not be construed as a guarantee or assurance of predicting future events.

General Information and Answers to Frequently Asked Questions -

Why is it important to perform a Reserve Study?

As previously mentioned, the Reserve allocation makes up a significant portion of the total monthly dues. This report provides the essential information that is needed to guide the Board of Directors in establishing the budget in order to run the daily operations of your association. It is suggested that a third party professionally prepare a Reserve Study since there is no vested interest in the property. Also, a professional knows what to look for and how to properly develop an accurate and reliable component list.

Now that we have "it", what do we do with "it"?

Hopefully, you will not look at this report and think it is too cumbersome to understand. Our intention is to make this Reserve Analysis very easy to read and understand. Please take the time to review it carefully and make sure the "main ingredients" (asset information) are complete and accurate. If there are any inaccuracies, please inform us immediately so we may revise the report.

Once you feel the report is an accurate tool to work from, use it to help establish your budget for the upcoming fiscal year. The Reserve allocation makes up a significant portion of the total monthly dues and this report should help you determine the correct amount of money to go into the Reserve fund. Additionally, the Reserve Study should act as a guide to obtain proposals in advance of pending normal maintenance and replacement projects. This will give you an opportunity to shop around for the best price available.

The Reserve Study should be readily available for Real Estate agents, brokerage firms, and lending institutions for potential future homeowners. As the importance of Reserves becomes more of a household term, people are requesting homeowners associations to reveal the strength of the Reserve fund prior to purchasing a condominium or townhome.

How often do we update or review "it"?

Unfortunately, there is a misconception that these reports are good for an extended period of time since the report has projections for the next 30 years. Just like any major line item in the budget, the Reserve Analysis should be reviewed *each year* <u>before</u> the budget is established. Invariably, some assumptions have to be made during the compilation of this analysis. Anticipated events may not materialize and unpredictable circumstances could occur. Aging rates and repair/replacement costs will vary from causes that are unforeseen. Earned interest rates may vary from year to year. These variations could alter the content of the Reserve Analysis. Therefore, this analysis should be reviewed annually, and a property observation should be conducted at least once every three years.

Is it the law to have a Reserve Study conducted?

The Government requires reserve analyses in approximately 20 states. The State of Colorado currently requires all associations to adopt a Reserve policy, but does not currently enforce a Reserve Study is completed. Despite enacting this current law, the chances are also very good the documents of the association require the association to have a Reserve fund established. This may not mean a Reserve Analysis is required, but how are you going to know there are enough funds in the account if you don't have the proper information? Hypothetically, some associations look at the Reserve fund and think \$50,000 is a lot of money and they are in good shape. What they don't know is the roof will need to be replaced within 5 years, and the cost of the roof is going to exceed \$75,000. So while \$50,000 sounds like a lot of money, in reality it won't even cover the cost of a roof, let alone all the other amenities the association is responsible to maintain.

What makes an asset a "Reserve" item versus an "Operating" item?

A "Reserve" asset is an item that is the responsibility of the association to maintain, has a limited Useful Life, predictable Remaining Useful Life expectancies, typically occurs on a cyclical basis that exceeds 1 year, and costs above a minimum threshold cost. An "operating" expense is typically a fixed expense that occurs on an annual basis. For instance, minor repairs to a roof for damage caused by high winds or other weather elements would be considered an "operating" expense. However, if the entire roof needs to be replaced because it has reached the end of its life expectancy, then the replacement would be considered a Reserve expense.

The GREY area of "maintenance" items that are often seen in a Reserve Study -

One of the most popular questions revolves around major "maintenance" items, such as painting the buildings or seal coating the asphalt. You may hear from your accountant that since painting or seal coating is not replacing a "capital" item, then it cannot be considered a Reserve issue. However, it is the opinion of several major Reserve Study providers that these items are considered to be major expenses that occur on a cyclical basis. Therefore, it makes it very difficult to ignore a major expense that meets the criteria to be considered a Reserve component. Once explained in this context, many accountants tend to agree and will include any expenses, such as these examples, as a Reserve component.

The Property Observation –

The Property Observation was conducted following a review of the documents that were established by the developer identifying all common area assets. In some cases, the Board of Directors at some point may have revised the documents. In either case, the most current set of documents was reviewed prior to inspecting the property. In addition, common area assets may have been reported to Aspen Reserve Specialties by the client, or by other parties.

Estimated life expectancies and life cycles are based upon conditions that were readily accessible and visible at the time of the observation. We did not destroy any landscape work, building walls, or perform any methods of intrusive investigation during the observation. In these cases, information may have been obtained by contacting the contractor or vendor that has worked on the property.

The Reserve Fund Analysis –

We projected the starting balance from taking the most recent balance statement, adding expected Reserve contributions for the rest of the year, and subtracting any pending projects for the rest of the year. We compared this number to the ideal Reserve Balance and arrived at the Percent funded level. Measures of strength are as follows:

0% - 30% Funded – Is considered to be a "weak" financial position. Associations that fall into this category are subject to Special Assessments and deferred maintenance, which could lead to lower property values. If the association is in this position, actions should be taken to improve the financial strength of the Reserve Fund.

31% - 69% Funded – The majority of associations are considered to be in this "fair" financial position. While this doesn't represent financial strength and stability, the likelihood of Special Assessments and deferred maintenance is diminished. Effort should be taken to continue strengthening the financial position of the Reserve fund.

70% - 99% Funded – This indicates financial strength of a Reserve fund and every attempt to maintain this level should be a goal of the association.

100% Funded – This is the ideal amount of Reserve funding. This means that the association has the exact amount of funds in the Reserve account that should be at any given time.

Summary of Willow Creek III HOA -

Assoc. ID # - 06023-13

Projected Starting Balance as of January 1, 2014 -	\$368,011
Ideal Reserve Balance as of January 1, 2014 -	\$354,062
Percent Funded as of January 1, 2014 -	104%
Recommended Reserve Allocation (per month) -	\$6,700
Minimum Reserve Allocation (per month) -	\$5,750
Recommended Special Assessment -	\$0

This report is an update to an existing Reserve Study that was prepared for the association 7 years ago for the 2007 fiscal period. An observation of the property's common area elements took place on October 23, 2013 to verify the information from this previous report. In addition, we obtained information by contacting local vendors and contractors, as well as communicating with the property representative. To the best of our knowledge, the conclusions and suggestions of this report are considered reliable and accurate insofar as the information obtained from these sources.

This property contains 515 detached homes and townhome style units throughout a community that was constructed in the late 1970's. Common area elements the association is responsible to maintain include a pool and clubhouse area, tennis courts, common area pathways, and landscaped areas. Recently completed Reserve projects include repairing some of the asphalt paths, resurfacing the clubhouse parking lot, renovating the pool and wader (including a new deck, new shade canopy, and resurfacing the pool and wader), replacing some pool pumps, and replacing some components in the clubhouse. Please refer to the Projected Reserve Expenditure table in the Financial Analysis section for a more detailed listing of when certain Reserve projects are scheduled to occur.

In comparing the projected balance of \$368,011 versus the ideal Reserve Balance of \$354,062, we find the association Reserve fund to be at the ideal financial position (approximately 104% funded of ideal) at this time. However, based on the information contained within this report, we find the current budgeted Reserve allocation to be less than adequate in maintaining the strength of the Reserve fund for future Reserve project consideration. Therefore, we recommend increasing the Reserve contribution to \$6,700 per month starting in 2014, followed by nominal annual increases of 4.35% thereafter to help offset the effects of inflation. By following the recommendation, the plan will maintain the Reserve account in a positive manner, while gradually increasing to a fully funded position within the thirty-year period.

In the percent Funded graph, you will see that we have also suggested a minimum Reserve contribution of \$5,750 per month. If the Reserve contribution falls below this rate, then the Reserve fund will fall into a situation where Special Assessments, deferred maintenance, and lower property values are possible at some point in the future.

The minimum Reserve allocation follows the "threshold" theory of Reserve funding where the "percent funded" status is not allowed to dip below 30% funded at any point during the thirty-year period. This was provided for one purpose only, to show the association how small the difference is between the two scenarios and how it would not make financial sense to contribute less money (less than \$1.85 per unit per month in this case) to the Reserve fund to only stay above a certain threshold. As you can see, the difference between the two scenarios is considered to be extremely minimal, and based on the risk, we strongly suggest the recommended Reserve Allocation is followed.

Comp #: 107 Building Roofs - Replace

Observations:

Wood shake is exhibiting some warped and cupped shingles, which is an indicating factor that the roof is nearing the end of it's life expectancy. Most associations install a 50 year dimensional shingle as the best aesthetic match to a shake roof. Despite the rating, a replacement cycle of about 50% the manufacturers warranty should be anticipated for composition shingle in this climate. Weather elements such as hail, wind, and temperature fluctuations will cause a shorter life for this product. Reserve funding includes complete tear off and replacement.

Location:Clubhouse, lifeguard shackQuantity:Approx. 22 squares

Life Expectancy: **25** Remaining Life: **0**

Best Cost: \$8,800 \$400/square; Estimate to replace

Worst Cost: **\$10,450** \$475/square; Higher estimate

Source of Information: Cost Database

General Notes:

Comp #: 120 Gutters/Downspouts - Replace

Observations:

Lines in front of the clubhouse are clogged with pine needles. It is important to keep the lines free from any debris to ensure proper drainage and to prevent any advanced deterioration of the metal materials. The average life expectancy for rain gutters and downspouts typically ranges between 20 - 25 years, depending on the level of maintenance and past cleanings. Typically, lines are replaced at the same time as roof materials. When replacement is required, we suggest upgrading the size of the lines to 5" or 6" to improve drainage.

Location:	Clubhouse building	
Quantity:	Approx. 125 LF	
Life Expectancy:	25	Remaining Life:
Best Cost:	\$75	0

0

\$6.00/LF; Estimate to replace

Worst Cost: **\$900** \$7.00/LF: Higher estimate for larger lines

Observations:

Location: Pool area, clubouse

Quantity: Approx. 555 LF

Life Expectancy: **3** Remaining Life: **0**

Best Cost: **\$2,360** \$4.25/LF; Estimate to repaint fence

Worst Cost: \$2,775
\$5.00/LF; Higher estimate for additional prep costs

Source of Information: Cost Database

General Notes:

Wader Area 3' High = 65 LF 5' High = 105 LF Pool Area 5' High = 340 LF Clubhouse 4' High = 45 LF

6023

Comp #: 209 Wood Fencing - Restain

Observations:

The only fence that was stained was the entry area. The fences have never been stained or painted to protect the materials against warping and splitting. As long as the fence remains unprotected (not sealed), Reserve funding is not required for this component. If association decides to restain in the future, then Reserve funding can be added in future Reserve Study updates.

Location:	Community Perimeter	General Notes:

Worst Cost:	\$0	E. Mineral Dr./E. Phillips Cir 170 LF
		Project History - 2012 - \$2845 (stained entry fence)
Source of Informa	tion:	

Comp #: 301 Clubhouse Siding - Replace

Observations:

Siding materials are in good condition for age of building with no signs of significant warping or deterioration. It appears as though this building has been well maintained in the past and the results are positive. Typically, this material has a life expectancy of 25 - 30 years. However, due to following proper paint cycles, we have extended the life by a couple years. When replacement is required, some associations are deciding to upgrade to a material (cement fiber) that has a longer life expectancy (50+ years), and requires less frequent painting cycles.

Location:	Clubhouse siding materials
Quantity:	Approx. 3,420 GSF

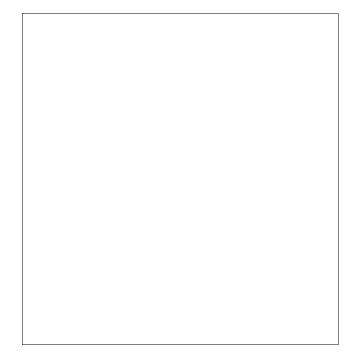

Life Expectancy: **32** Remaining Life: **13** Best Cost: **\$23,950**

\$7.00/GSF; Estimate to replace siding

Worst Cost:\$27,400\$8.00/GSF; Higher estimate for better materials

Comp #: 601 Concrete Sidewalks/Decks - Repair

Observations:

The concrete stoops have settled on several units (units observed 8124, 8152 and 8158. Townhome sidewalk numbers include concrete garage aprons. Unit 8183 has a drain installed in sidewalk located at front door. Unit 8285 has a 2" buckle in concrete at front door. Unit's 8178, 8052, 7986, 7990 and 7994 have a 1" buckle in concrete that could pose a tripping hazard. While it is unlikely that all concrete surfaces will fail and need to be replaced at the same time, frequent repairs and replacement to a percentage of the area (5% or 3600 GSF), should be anticipated every 3 years.

Location:	Common paths, clubhouse	
Quantity:	Approx. 72,080 GSF	
Life Expectancy:	3	Remaining Life: 0

Best Cost: **\$28,850** Allowance to repair 5% of area every 3 years

Worst Cost: \$32,450 Higher estimate for more repairs

Source of Information: Cost Database

Comp #: 1101 Pool - Resurface

Observations:

resurfaced in 2005 with the Diamond Brite plaster material. According to several maintenance companies, this coating should last 2-3 times longer than white marble plaster because aggregate is much more durable than marble dust. There has not been any reports of having to replace the pool due to using this type of surface. This type of material typically costs 50% more than the typical surface of marble dust.

Location:	Pool Area	General Notes:

Source of Informa	tion:	

Comp #: 1701 Irrigation System - Rebuild

Observations:

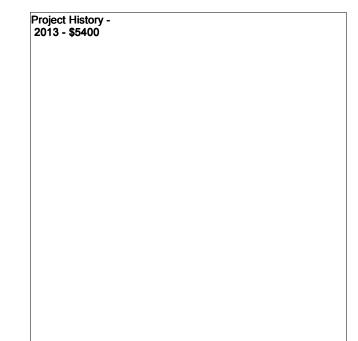

No reports of major problems with the irrigation system was noted at time of inspection or preparing this report. This system is less than 10 years old, however, systems that reach 15 - 20 years old start to see the need for major renovations and repairs. Therefore, we suggest the association establish a Reserve allowance for major repairs every 5 years. The remaining life is based on the age of the system and when it will reach the age that major repairs will be required.

Location:	Landscaped areas

Comp #: 1801 Groundcover - Replenish

Picture Unavailable

Picture Unavailable

Observations:

In general, the grounds are in good condition, but there are a few areas that are bare and looks like it was not completed by the developer. We suggest establishing Reserve funding for periodic refurbishment of the landscaping to maintain an appropriate appearance. The Board will ultimately decide how much to spend on landscape refurbishment when needed. Our estimate is based on the history of what the association has been spending over the past 5 years.

General Notes:

landscaping expenses -2009 - \$36,700 2012 - \$51,100

Comp #: 1804 Tree - Replacement

Observations:

Trees appeared to be healthy and in good condition at time of inspection. It is very difficult to predict a replacement cycle for trees as there are several factors that will contribute to a tree dying. Factors such as disease, infestation of insects, heavy snow storms, etc. can all attribute to eventual tree replacement. Since it is difficult to predict when the replacement will be necessary, Reserve funding is typically not a factor. Therefore, unless requested by the association, Reserve funding will not be included as part of the study for this component.

Comp #: 2025 Catastrophic Event

Picture Unavailable

Picture Unavailable

Observations:

This item has been included in this report per the request of the association and its board of directors. Major events that cannot be predicted should not be included in Reserve Studies due to the unpredictable nature of when a catastrophic event will happen and to what extent (the cost involved) the event will cause. All the information in this line item has been provided by the association and no figures were suggested by Aspen Reserve Specialties. Our only suggestion was for this to not be included in a Reserve Study and be treated as a separate issue from Reserves.

Glossary of Commonly used Words and Phrases (provided by the National Reserve Study Standards of the Community Associations Institute)

Asset or Component – Individual line items in the Reserve Study, developed or updated in the Physical Analysis. These elements form the building blocks for the Reserve Study. Components typically are: 1) Association Responsibility, 2) with limited Useful Life expectancies, 3) have predictable Remaining Life expectancies, 4) above a minimum threshold cost, and 5) required by local codes.

Cash Flow Method – A method of developing a Reserve Funding Plan where contributions to the Reserve fund are designed to offset the variable annual expenditures from the Reserve fund. Different Reserve Funding Plans are tested against the anticipated schedule of Reserve expenses until the desired Funding Goal is achieved.

Component Inventory – The task of selecting and quantifying Reserve Components. This task can be accomplished through on-site visual observations, review of association design and organizational documents, a review of established association precedents, and discussion with appropriate association representatives.

Deficit – An actual (or projected) Reserve Balance, which is less than the Fully Funded Balance.

Effective Age – The difference between Useful Life and Remaining Useful Life. Not always equivalent to chronological age, since some components age irregularly. Used primarily in computations.

Financial Analysis – The portion of the Reserve Study where current status of the Reserves (Measured as cash or Percent Funded) and a recommended Reserve contribution rate (Reserve Funding Plan) are derived, and the projected Reserve income and expense over time is presented. The Financial Analysis is one of the two parts of the Reserve Study.

Component Full Funding – When the actual (or projected) cumulative Reserve balance for all components is equal to the Fully Funded Balance.

Fully Fund Balance (aka – Ideal Balance) – An indicator against which Actual (or projected) Reserve Balance can be compared. The Reserve balance that is in direct proportion to the fraction of life "used up" of the current Repair or Replacement cost. This number is calculated for each component, and then summed together for an association total.

FFB = Replacement Cost X Effective Age / Useful Life

Fund Status – The status of the Reserve Fund as compared to an established benchmark, such as percent funding.

Funding Goals – Independent of methodology utilized, the following represent the basic categories of Funding Plan Goals.

- **Baseline Funding:** Establishing a Reserve funding goal of keeping the Reserve Balance above zero.
- **Component Full Funding:** Setting a Reserve funding goal of attaining and maintaining cumulative Reserves at or near 100% funded.
- **Threshold Funding:** Establishing a Reserve funding goal of keeping the Reserve balance above a specified dollar or Percent Funded amount. Depending on the threshold, this may be more or less conservative than the "Component Fully Funding" method.

Funding Plan – An associations plan to provide income to a Reserve fund to offset anticipated expenditures from that fund.

Funding Principles –

- Sufficient Funds When Required
- Stable Contribution Rate over the Years
- Evenly Distributed Contributions over the Years
- Fiscally Responsible

Life and Valuation Estimates – The task of estimating Useful Life, Remaining Useful Life, and Repair or Replacement Costs for the Reserve components.

Percent Funded – The ratio, at a particular point of time (typically the beginning of the Fiscal Year), of the *actual* (or *projected*) Reserve Balance to the accrued *Fund Balance*, expressed as a percentage.

Physical Analysis – The portion of the Reserve Study where the Component Inventory, Condition Assessment, and Life and Valuation Estimate tasks are performed. This represents one of the two parts of the Reserve Study.

Remaining Useful Life (RUL) – Also referred to as "Remaining Life" (RL). The estimated time, in years, that a reserve component can be expected to *continue* to serve its intended function. Projects anticipated to occur in the initial year have "0" Remaining Useful Life.

Replacement Cost – The cost of replacing, repairing, or restoring a Reserve Component to its original functional condition. The Current Replacement Cost would be the cost to replace, repair, or restore the component during that particular year.

Reserve Balance – Actual or projected funds as of a particular point in time (typically the beginning of the fiscal year) that the association has identified for use to defray the future repair or replacement of those major components in which the association is obligated to maintain. Also known as Reserves, Reserve Accounts, Cash Reserves. This is based upon information provided and is not audited.

Reserve Provider – An individual that prepares Reserve Studies. Also known as **Aspen Reserve Specialties.**

Reserve Study – A budget-planning tool that identifies the current status of the Reserve fund and a stable and equitable Funding Plan to offset the anticipated future major common area expenditures. The Reserve Study consists of two parts: The Physical Analysis and the Financial Analysis.

Special Assessment – An assessment levied on the members of an association in addition to regular assessments. Special Assessments are often regulated by governing documents or local statutes.

Surplus – An actual (or projected) Reserve Balance that is greater that the Fully Funded Balance.

Useful Life (UL) – Also known as "Life Expectancy", or "Depreciable Life". The estimated time, in years, that a Reserve component can be expected to serve its intended function if properly constructed and maintained in its present application or installation.
