Introduction to the Reserve Analysis -

The elected officials of this association made a wise decision to invest in a Reserve Analysis to get a better understanding of the status of the Reserve funds. This Analysis will be a valuable tool to assist the Board of Directors in making the decision to which the dues are derived. Typically, the Reserve contribution makes up 15% - 40% of the association's total budget. Therefore, Reserves is considered to be a significant part of the overall monthly association payment.

Every association conducts its business within a budget. There are typically two main parts to this budget, Operating and Reserves. The Operating budget includes all expenses that are fixed on an annual basis. These would include management fees, maintenance fees, utilities, etc. The Reserves is primarily made up of Capital Replacement items such as asphalt, roofing, fencing, mechanical equipment, etc., that <u>do not</u> normally occur on an annual basis.

The Reserve Analysis is also broken down into two different parts, the Physical Analysis and the Financial Analysis. The Physical Analysis is information regarding the physical status and replacement cost of major common area components that the association is responsible to maintain. It is important to understand that while the Component Inventory will remain relatively "stable" from year to year, the Condition Assessment and Life/Valuation Estimates will most likely vary from year to year. You can find this information in the **Asset Inventory Section** (Section 2) of this Reserve Analysis. The **Financial Analysis Section** is the evaluation of the association's Reserve balance, income, and expenses. This is made up of a finding of the clients current Reserve Fund Status (measured as Percent Funded) and a recommendation for an appropriate Reserve Allocation rate (also known as the Funding Plan). You can find this information in Section 3 of this Reserve Analysis.

The purpose of this Reserve Analysis is to provide an educated estimate as to what the Reserve Allocation needs to be. The detailed schedules will serve as an advanced warning that major projects will need to be addressed in the future. This will allow the Board of Directors to have ample timing to obtain competitive estimates and bids that will result in cost savings to the individual homeowners. This will also ensure the physical well being of the property and ultimately enhance each owner's investment, while limiting the possibility of unexpected major projects that may lead to Special Assessments.

It is important for the client, homeowners, and potential future homeowners to understand that the information contained in this analysis is based on estimates and assumptions gathered from various sources. Estimated life expectancies and cycles are based upon conditions that were readily visible and accessible at time of the observation. No destructive or intrusive methods (such as entering the walls to inspect the condition of electrical wiring, plumbing lines, and telephone wires) were performed. In addition, environmental hazards (such as lead paint, asbestos, radon, etc.), construction defects, and acts of nature have not been investigated in the preparation of this report. If problem areas were revealed, a reasonable effort has been made to include these items within the report. While every effort has been made to ensure accurate results, this report reflects the judgment of Aspen Reserve Specialties and should not be construed as a guarantee or assurance of predicting future events.

General Information and Answers to Frequently Asked Questions -

Why is it important to perform a Reserve Study?

As previously mentioned, the Reserve allocation makes up a significant portion of the total monthly dues. This report provides the essential information that is needed to guide the Board of Directors in establishing the budget in order to run the daily operations of your association. It is suggested that a third party professionally prepare a Reserve Study since there is no vested interest in the property. Also, a professional knows what to look for and how to properly develop an accurate and reliable component list.

Now that we have "it", what do we do with "it"?

Hopefully, you will not look at this report and think it is too cumbersome to understand. Our intention is to make this Reserve Analysis very easy to read and understand. Please take the time to review it carefully and make sure the "main ingredients" (asset information) are complete and accurate. If there are any inaccuracies, please inform us immediately so we may revise the report.

Once you feel the report is an accurate tool to work from, use it to help establish your budget for the upcoming fiscal year. The Reserve allocation makes up a significant portion of the total monthly dues and this report should help you determine the correct amount of money to go into the Reserve fund. Additionally, the Reserve Study should act as a guide to obtain proposals in advance of pending normal maintenance and replacement projects. This will give you an opportunity to shop around for the best price available.

The Reserve Study should be readily available for Real Estate agents, brokerage firms, and lending institutions for potential future homeowners. As the importance of Reserves becomes more of a household term, people are requesting homeowners associations to reveal the strength of the Reserve fund prior to purchasing a condominium or townhome.

How often do we update or review "it"?

Unfortunately, there is a misconception that these reports are good for an extended period of time since the report has projections for the next 30 years. Just like any major line item in the budget, the Reserve Analysis should be reviewed *each year* <u>before</u> the budget is established. Invariably, some assumptions have to be made during the compilation of this analysis. Anticipated events may not materialize and unpredictable circumstances could occur. Aging rates and repair/replacement costs will vary from causes that are unforeseen. Earned interest rates may vary from year to year. These variations could alter the content of the Reserve Analysis. Therefore, this analysis should be reviewed annually, and a property observation should be conducted at least once every three years.

Is it the law to have a Reserve Study conducted?

The Government requires reserve analyses in approximately 20 states. The State of Colorado currently requires all associations to adopt a Reserve policy, but does not currently enforce a Reserve Study be completed. Despite enacting this current law, the chances are also very good the documents of the association require the association to have a Reserve fund established. This may not mean a Reserve Analysis is required, but how are you going to know there are enough funds in the account if you don't have the proper information? Hypothetically, some associations look at the Reserve fund and think \$50,000 is a lot of money and they are in good shape. What they don't know is the roof will need to be replaced within 5 years, and the cost of the roof is going to exceed \$75,000. So while \$50,000 sounds like a lot of money, in reality it won't even cover the cost of a roof, let alone all the other amenities the association is responsible to maintain.

What makes an asset a "Reserve" item versus an "Operating" item?

A "Reserve" asset is an item that is the responsibility of the association to maintain, has a limited Useful Life, predictable Remaining Useful Life expectancies, typically occurs on a cyclical basis that exceeds 1 year, and costs above a minimum threshold cost. An "operating" expense is typically a fixed expense that occurs on an annual basis. For instance, minor repairs to a roof for damage caused by high winds or other weather elements would be considered an "operating" expense. However, if the entire roof needs to be replaced because it has reached the end of its life expectancy, then the replacement would be considered a Reserve expense.

The GREY area of "maintenance" items that are often seen in a Reserve Study -

One of the most popular questions revolves around major "maintenance" items, such as painting the buildings or seal coating the asphalt. You may hear from your accountant that since painting or seal coating is not replacing a "capital" item, then it cannot be considered a Reserve issue. However, it is the opinion of several major Reserve Study providers that these items are considered to be major expenses that occur on a cyclical basis. Therefore, it makes it very difficult to ignore a major expense that meets the criteria to be considered a Reserve component. Once explained in this context, many accountants tend to agree and will include any expenses, such as these examples, as a Reserve component.

The Property Observation -

The Property Observation was conducted following a review of the documents that were established by the developer identifying all common area assets. In some cases, the Board of Directors at some point may have revised the documents. In either case, the most current set of documents was reviewed prior to inspecting the property. In addition, common area assets may have been reported to Aspen Reserve Specialties by the client, or by other parties.

Estimated life expectancies and life cycles are based upon conditions that were readily accessible and visible at the time of the observation. We did not destroy any landscape work, building walls, or perform any methods of intrusive investigation during the observation. In these cases, information may have been obtained by contacting the contractor or vendor that has worked on the property.

The Reserve Fund Analysis –

We projected the starting balance from taking the most recent balance statement, adding expected Reserve contributions for the rest of the year, and subtracting any pending projects for the rest of the year. We compared this number to the ideal Reserve Balance and arrived at the Percent funded level. Measures of strength are as follows:

0% - 30% Funded – Is considered to be a "weak" financial position. Associations that fall into this category are subject to Special Assessments and deferred maintenance, which could lead to lower property values. If the association is in this position, actions should be taken to improve the financial strength of the Reserve Fund.

31% - 69% Funded – The majority of associations are considered to be in this "fair" financial position. While this doesn't represent financial strength and stability, the likelihood of Special Assessments and deferred maintenance is diminished. Effort should be taken to continue strengthening the financial position of the Reserve fund.

70% - 99% Funded – This indicates financial strength of a Reserve fund and every attempt to maintain this level should be a goal of the association.

100% Funded – This is the ideal amount of Reserve funding. This means that the association has the exact amount of funds in the Reserve account that should be at any given time.

Summary of Willow Creek III HOA

Assoc# - 6023

Projected Starting Balance as of January 1, 2019 - Ideal Reserve Balance as of January 1, 2019 -	\$485,886 \$836,338
Percent Funded as of January 1, 2019 -	58%
Recommended Reserve Allocation (per month) -	\$12,225
Minimum Reserve Allocation (per month) -	\$10,375
Recommended Special Assessment -	\$0

This report is an update to an existing Reserve Study that was prepared by another provider for the association approximately 5 years ago for the 2014 fiscal period. An observation of the property's common area elements took place on April 17th, 2018 to verify the information from this previous report. Some measurements were taken to verify and update the quantities of the components. In addition, we obtained information by contacting local vendors and contractors, as well as communicating with the property representative. To the best of our knowledge, the conclusions and suggestions of this report are considered reliable and accurate insofar as the information obtained from these sources.

This property contains 515 detached homes and townhomes within a community that was constructed in the late 1970s. Common area asset responsibilities of the association include, but are not limited to a clubhouse, tennis courts, perimeter fencing, entry monuments, mailboxes, common area landscaping, and an irrigation system. Please refer to the *Projected Reserve Expenditures* table of the Financial Analysis for a detailed listing of when projects are programmed to be addressed.

In comparing the projected balance of \$485,886 versus the ideal Reserve Balance of \$836,338, we find the association Reserve fund to be in a fair financial position (approximately 58% funded of ideal) at this time. However, based on the information contained within this report, we find the current budgeted Reserve allocation to be less than adequate in maintaining the strength of the Reserve fund for future Reserve project consideration. Therefore, we recommend increasing the Reserve contribution to \$12,225 per month starting in 2019, with nominal annual increases of 2.75% for 18 years, followed by secondary annual increases of 3.75% thereafter to help offset the effects of inflation. By following the recommendation, the plan will maintain the Reserve account in a positive manner, while gradually increasing to a fully funded position within the thirty-year period.

In the percent Funded graph, you will see that we have also suggested a minimum Reserve contribution of \$10,375 per month. If the Reserve contribution falls below this rate, then the Reserve fund will fall into a situation where Special Assessments, deferred maintenance, and lower property values are possible at some point in the future.

The minimum Reserve allocation follows the "threshold" theory of Reserve funding where the "percent funded" status is not allowed to dip below 30% funded at any point during the thirty-year period. This was provided for one purpose only, to show the association how small the difference is between the two scenarios and how it would not make financial sense to contribute less money (approximately \$3.59 per unit per month in this case) to the Reserve fund to only stay above a certain threshold. As you can see, the difference between the two scenarios is considered to be extremely minimal, and based on the risk, we strongly suggest the recommended Reserve Allocation is followed.

Comp #: 105 Comp Shingle Roof - Replace

Observations:

- It was reported that the roof was installed in 2015.

- It appears this roof material is rated as a 30 - 40 year product. Despite this rating, a life expectancy of 18 - 20 years is expected in this environment.

- Due to the potentially harsh winters, extensive freeze/thaw cycle, and likelihood of hail events over the useful life of the roof, we typically see associations replacing roofs sooner than the manufacturer's suggested useful life.

- Remaining life is based on age of roof and observed conditions.

Location:	Clubhouse, Lifeguard Shack		
Quantity:	Approx. 22 squares		
Life Expectancy:	22 Remaining Life: 18		
<i>Best Cost:</i> \$475/square; Estir	\$10,450 mate to remove and replace		
<i>Worst Cost:</i> \$550/square; High	\$12,100 her estimate for more labor costs		
Source of Informa	tion: Cost Database		

Project Histo - 2015: Insta	ory: alled composite shingle roofs - no cost provide

Comp #: 120 Gutters/Downspouts - Replace

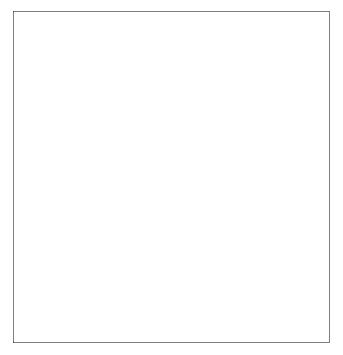

Observations:

- Due to the small quantity of rain gutters and downspouts, we recommend replacing as needed with operating funds.

Location:	Clubhouse
Quantity:	Approx. 125 LF
Life Expectancy:	N/A Remaining Life:
Best Cost:	\$0
Worst Cost:	\$0
Source of Informa	tion:

Comp #: 204 Building Ext Surfaces - Repaint

Observations:

- It was reported that the clubhouse was painted in 2015.

- In this climate, it is recommended that exterior surfaces are painted every 5 7 years.
- The exact timeframe depends on the color chosen and the level of exposure to elements, as well as the quality of past paint jobs.

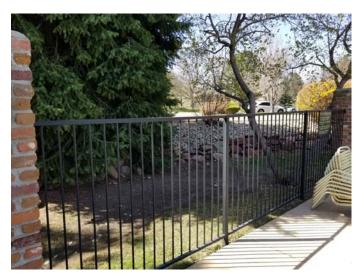

- The remaining life is based on the observed conditions.

Location:	Clubhouse	General Notes:
Quantity:	Moderate GSF	Project History: - 2004 \$2335 (Gardner Painting)
Life Expectancy:	6 Remaining Life: 2	- 2011: \$2330 - 2015: No cost provided
<i>Best Cost:</i> Estimate to repain	\$5,000 t wood surfaces	
<i>Worst Cost:</i> Higher estimate fo	\$7,000 or more prep work	
Source of Informa	tion: Cost database	

Comp #: 207 Iron Fencing - Repaint

Observations:

- The paint on the metal surfaces around the pool and clubhouse was in poor condition at the time of the site observation, with several areas of rust and corrosion noted.

- In this climate, we recommend repainting this component every 3 - 4 years to maintain appearance and protect metal surfaces.

- Remaining life based on current condition.

Location:	Clubhouse, Pool Area	
Quantity:	Approx. 555 LF	
Life Expectancy:	3 Remaining Life: 1	
Best Cost:	\$3,900	
\$7.00/LF; Estimate	e to repaint fence	
<i>Worst Cost:</i> \$7.75/LF; Higher e	\$4,300 estimate for additional prep costs	

Source of Information: Cost Database

General Notes:

Wader Area: - 3' High = 65 LF - 5' High = 105 LF

Pool Area: - 5' High = 340 LF

Clubhouse : - 4' High = 45 LF

Comp #: 209 Wood Fencing - Restain

Observations:

- As long as the fence remains unprotected (not sealed), Reserve funding is not required for this component.

- By staining the fence, the replacement cycle may be extended by 5 - 10 years.

- Some associations have the opinion it is not worth the expense to extend the life by only 5 - 10 years.

- Additional benefits to staining include maintaining a proper appearance for the community (no water staining, warped and split boards, etc.).

Location:	Community Perimeter	General Notes:
Quantity:	Approx. 3,340 LF	6' Tall Privacy Fence NW Property Line to S. Quince/Mineral - 1,920 LF
Life Expectancy:	N/A Remaining Life:	SE Property Line along Path (new) - 100 LF
Best Cost:	\$0	10' Tall Privacy Fence 8145 Syracuse to County Line - 1015 LF
		4' Tall Split Rail Fence E. Phillips Cr. Walkway, by drainage channel - 135 LF
Worst Cost:	\$0	E. Mineral Dr./E. Phillips Cir 170 LF
		Project History: - 2012: \$2845 (stained entry fence)
Source of Informa	tion:	

Comp #: 301 Clubhouse Siding - Replace

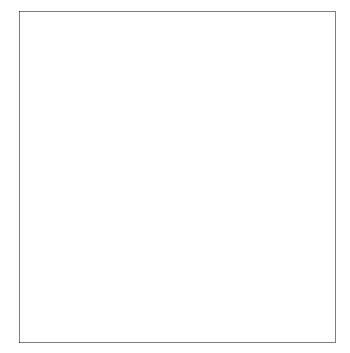

Observations:

- The siding materials were in fair condition at the time of the site observation with minimal signs of advanced deterioration noted.

- Typically, this material has a life expectancy of 25 - 30 years. However, due to following proper paint cycles, we have extended the life by a couple years.

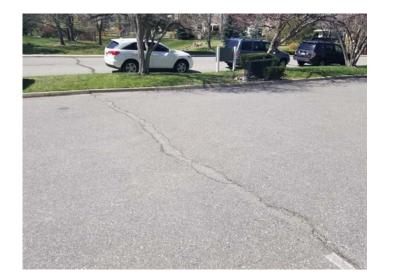

- When replacement is required, some associations are deciding to upgrade to a material (fiber cement) that has a longer life expectancy.

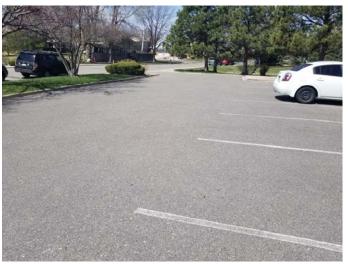

Location:	Clubhouse siding materials	
Quantity:	Approx. 3,420 GSF	
Life Expectancy:	32 Remaining Life: 8	
<i>Best Cost:</i> \$9.00/GSF; Estim	\$30,800 ate to replace	
<i>Worst Cost:</i> \$10.50/GSF; High	···/·	
Source of Informa	ation: Cost Database	

Comp #: 401 Asphalt - Overlay

Observations:

- The asphalt overlay on the parking lot was in good to fair condition at the time of the site observation.

- The average life expectancy for asphalt surfaces ranges between 20 - 27 years for surfaces that are maintained on a regular schedule.

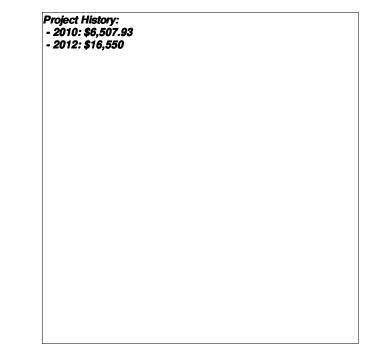

- Maintenance includes crack fill and repairing small potholes annually as an operating expense.

- In addition, asphalt should be seal coated every 3 - 4 years, depending on the level of traffic and snow removing techniques.

Location:	Clubhouse Parking Lot	
Quantity:	Арр	rox. 9,565 GSF
Life Expectancy:	24	Remaining Life: 17
<i>Best Cost:</i> \$2.25/GSF; Estima	\$21, ate fo	
Worst Cost:	\$ 28,	700

\$3.00/GSF; Higher estimate for local repairs

Source of Information: Cost Database

Comp #: 402 Asphalt - Seal Coat/crack fill

Observations:

- In this environment, expect to seal asphalt every 2 - 3 years, depending on traffic levels and effects from weather.

- Sealcoating is applied to protect the asphalt from ultra-violet rays and water.

- This helps in slowing the process of oxidation and raveling.

- While acting as a protective barrier, it also maintains the appearance of the community to maintain or improve property values.

Location:	Parking lot, common pathways	General Notes:
Quantity:	Approx. 25,125 GSF	Clubhouse Parking: Approx. 9,565 GSF Common Paths:
Life Expectancy:	3 Remaining Life: 1	Nichols-Rosalyn, S Quince Way: Approx.4,760 GSF E. Phillips Cr: Approx. 7,800 GSF Behind Townhomes: Approx. 3,000 GSF
Best Cost:	\$6,300	
Estimate for seal	coat only	
Worst Cost:	\$7,550	
Higher estimate fo	or some repairs	
Source of Informa	tion: Cost Database	

Comp #: 406 Curb and Gutters - Repair

Observations:

- Curbs and gutters are subject to more advanced deterioration due to trucks and plows hitting them during the year.

- It is unlikely that all concrete surfaces will need to be replaced at the same time.

- Therefore, we suggest establishing a Reserve fund for periodic repairs and replacement of 10% (approx. 140 GSF) every 3 years.

- Coordinate with other concrete surfaces for best cost estimate.

Location:	Clubhouse Parking Lot	
Quantity:	Approx. 1,360 GSF	
Life Expectancy:	3 Remaining Life: 1	
Best Cost:	\$1,700	
Estimate to repair 10% of area every 3 years		
Worst Cost: \$1,975 Higher estimate for more repairs		
Source of Informa	tion: Cost database	

Clubhouse Parking: - Approx. 680 LF x 2 = Approx. 1,360 GSF				

Comp #: 506 Doors/Windows - Partial Replacement

Observations:

- Based on the expense history, it does not appear that all windows and doors were replaced.

- Therefore, due to varying ages, we have revised the philosophy to include an allowance for partial replacement of windows and doors every 10 years.

Location:	Clubhouse	Building
Looullon.	CiubiiCu3C	Dunung

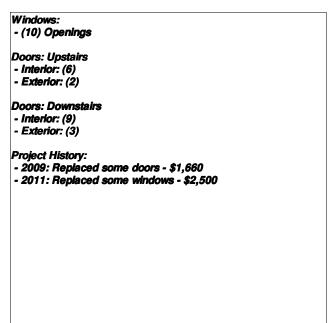

Quantity: Approx (30) openings

Life Expectancy: 10 Remaining Life: 5

Best Cost: **\$6,000** Allowance for partial replacement

Worst Cost: **\$7,500** Higher estimate for better quality

Source of Information: Cost Database

Comp #: 601 Concrete Sidewalks/Decks - Repair

Observations:

- Similar to other concrete surfaces, it is unlikely that all concrete surfaces will fail and need to be replaced at the same time.

- Therefore, we suggest establishing a Reserve fund for frequent repairs and replacement to a percentage of the area (5% or 3,600 GSF) every 3 years.

- Coordinate repairs with other concrete surfaces for best cost estimate.

Location:	Common paths, clubhouse	General Notes:
Quantity:	Approx. 72,080 GSF	Clubhouse/Tennis court Sidewalks: Approx.785 GSF Common Paths: Approx. 1,725 GSF
Life Expectancy:	3 Remaining Life: 1	Mailbox Kiosks: Approx. 200 GSF Townhome Sidewalks: Approx. 69,370 GSF
<i>Best Cost:</i> Allowance to repa	\$39,600 hir 5% of area every 3 years	Project History: - 2005: \$5,265 on mudjacking - 2007: \$4,697.20 - 2008: \$3,748
<i>Worst Cost:</i> Higher estimate f	\$46,800 or more repairs	- 2011: \$16,574
Source of Informa	ation: Cost Database	

Comp #: 603 Asphalt Paths - Resurface

Observations:

- The asphalt paths throughout the community appeared to be in fair to poor condition. There were several areas where the asphalt was cracking and deteriorating.

- Remaining life is based on the observed condition and age of the paths.

Location: Common pathways throughout community

Quantity: Approx. 15,560 GSF

Life Expectancy: 18 Remaining Life: 4

Best Cost: **\$50,575** \$3.25/GSF; Estimate to resurface

Worst Cost: **\$54,475** \$3.50/GSF; Higher estimate for more labor

Source of Information: Cost database

General Notes:

Nichols to Rosalyn, S Quince Way: - Approx. 4,760 GSF E. Phillips Cr: Approx. 7,800 GSF Behind Townhomes: Approx. 3,000 GSF

Project History: - 2012: Bike Path Improvement - \$1,610

Comp #: 608 Pool Deck - Replace

Observations:

- The pool deck was in good condition with no significant signs of advanced deterioration noted during the site observation.

- Expect a useful life of 30 35 years from this pool deck.
- Remaining life is based on the age of the concrete and observed conditions.

Location:	Pool Area		
Quantity:	Approx. 5,475 GSF		
Life Expectancy:	32 Remaining Life: 26		
<i>Best Cost:</i> \$15/GSF; Estima	\$82,125 te to replace		
Worst Cost: \$98,550 \$18/GSF; Higher estimate			
Source of Information: Cost Database			

General Notes:

Wader Area Deck: Approx. 615 GSF Pool Area Deck: Approx. 4,860 GSF

Comp #: 609 Composite Bridges - Replace

Observations:

- Most composite material manufacturers offer a 25 year limited warranty from against defects.

- However, over a period of time, the material begins to fade and scratch and eventually will become aesthetically unpleasing.

- Therefore, due to the level of use and exposure to the elements, we recommend establishing a replacement cycle of 18 - 22 years.

- We recommend replacing the rail and material at the same time.

Location:	Tennis Court Area, Common Paths, etc.	General Notes:
Quantity:	Approx. 830 GSF	Tennis Court Bridges: Approx. 45 GSF E. Phillips Cr. Walkway: Approx. 310 GSF
Best Cost:	22 Remaining Life: 8 \$29,050 te to replace with similar	Townhome Walkway: Approx. 155 GSF Townhome Units: 8031 - 8108 = Approx. 40 GSF 8140 = Approx. 40 GSF 8150 - 8160 = Approx. 40 GSF 8152 - 8162 = Approx. 40 GSF
<i>Worst Cost:</i> \$40/GSF; Higher	\$33,200 estimate	8191 - 8197 = Approx. 60 GSF 8007- 8027 = Approx. 100 GSF

Comp #: 1003 Chain Link Fencing - Replace

Observations:

- No warped or broken areas noted.
- Replacement for this fencing is included with tennis court replacement.
- Make local repairs as necessary as an operating issue.

Location:	Tennis Courts	General Notes:
Quantity:	Approx. 1000 LF	
Life Expectancy: Best Cost:	N/A Remaining Life: \$0	
Worst Cost:	\$0	
Source of Informa	tion:	

Comp #: 1007 Timber Walls - Major Repairs

Observations:

- The top timber tends to become the first piece to deteriorate and need to be replaced.

- This type of wall also tends to be susceptible to movement and leaning.

- When replacement is necessary, most associations are converting to block wall for longer life expectancy and less maintenance.

Location:	Common Areas Throughout Community	General Notes:

7669 E. Phillips Cr: Approx. 75 LF

Comp #: 1014 Brick - Major Repairs

Observations:

- The grout on many columns was beginning to deteriorate and there were significant signs of deterioration noted throughout the property.

- While it is unlikely that the entire wall and columns will need to be replaced at the same time, it is likely that major repairs will be necessary to replace loose or missing stones.

- Depending on the effects from elements, we suggest establishing a Reserve fund for periodic repairs to the wall every 5 years.

Location:	Pool and community perimeter			
Quantity:	Approx. 4,790 GSF			
Life Expectancy:	5 Remaining Life: 0			
Best Cost:	\$5,325			
Allowance for minor repairs to brick columns				
Worst Cost:	\$6,250			
Higher allowance for more repairs				
Source of Informa	tion: Cost Database

Comp #: 1101 Pool - Resurface

Observations:

- Expect to resurface pool every 15 16 years depending on levels of maintenance and care.
- Due to a significant labor cost savings, we recommend reserving to replace perimeter tile and coping at the same time as resurfacing the plaster.

Location:	Poo	l Area
Quantity:	Арр	rox. 6,250 GSF
Life Expectancy:	16	Remaining Life: 10
Best Cost:\$56,250\$9.00/GSF; Estimate to resurface with plaster		

Worst Cost: **\$65,625** \$10.50/GSF; Higher estimate for more labor

Source of Information: Cost Database

General Notes:

Project History: - 2013: \$200,000 on pool/wader deck, resurface pool and wader, coping perimeter, shade canopy system

Comp #: 1103 Wader - Resurface

Observations:

- This type of shallow wading pool typically requires resurfacing more frequently than a full sized pool because a higher concentration of chemicals and higher exposure to UV rays.

- In this capacity, we recommend resurfacing wading pools twice every pool resurface cycle.

- Remaining life is based on the pool resurfacing and observed conditions.

Location:	Wader Area
Quantity:	(1) 15x22 Wader Pool
Life Expectancy:	8 Remaining Life: 2
<i>Best Cost:</i> Estimate to replas	\$5,300 ster surface
<i>Worst Cost:</i> Higher estimate fo	\$6,250 or more labor

Source of Information: Cost Database

Comp #: 1104 Coping Stone / Tile - Replace

Observations:

- It is typical to replace these materials every pool resurface cycle to receive the best costs possible.
- Remaining life is based on the age of the new pool area.

Location: Main and wader pool	General Notes:
Quantity: Approx. 1,275 LF	Wader Pool Tile: Approx. 75 LF - \$30 - \$35/LF

Sling Chairs: (24) Sling Lounge: (28)

Comp #: 1201 Tennis Court - Replace

Observations:

- Asphalt tennis courts do not hold up to weather elements in this climate, and asphalt tends to crack very frequently and is a constant maintenance issue.

- It is recommended that the courts be replaced with post tension concrete, and we recommend this happen as soon as possible.

- The association has decided to wait to replace the courts until 2022. We have adjusted the remaining life of the tennis courts to 3 years per their request.

Location:	Tennis Courts next to pool area	
Quantity:	(5) 120x60	
Life Expectancy:	40 Remaining Life: 3	
Best Cost:	\$300,000	
\$60,000/court; Est. to replace with post tension		
<i>Worst Cost:</i> \$65,000/court; Hig	\$325,000 Ther estimate for more labor	

Source of Information: Research with contractor

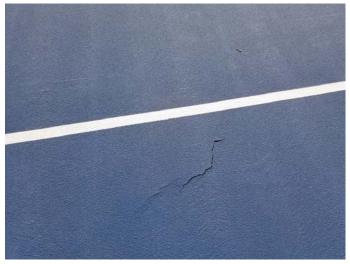

General Notes:

Project History: - 2007: \$42,750 - no description given - 2012: \$50,200 - crack seal and resurface 5 tennis courts - 2017: \$68,000 - resurface courts

Comp #: 1202 Tennis Court - Recoat/Paint

Observations:

- The association is planning on replacing these courts with post-tension concrete in 2022.

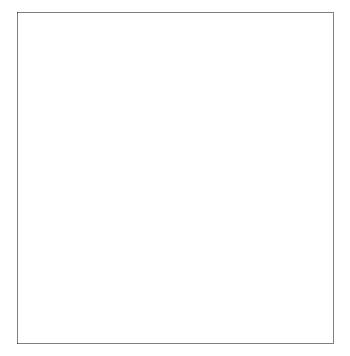

- Post-tention concrete will also need to be repainted every 5 - 7 years. Some repairs may be necessary as well at this time.

- Remaining life is based on the timinig of the court installation.

Location:	Tennis Courts
Quantity:	(5) 120x60 Courts
Life Expectancy:	5 Remaining Life: 3
Best Cost:	\$42,500
\$8500/court; Est. t	to crack fill, repaint/coat

Comp #: 1706 Backflow Devices - Replace

Observations:

- Devices can be rebuilt and repaired when needed as a maintenance issue.

- It is very seldom that a complete system would need to be replaced due to normal wear and tear.

- Replacement would be as a result of freezing conditions if system is not winterized properly or in a timely manner.

- No Reserve funding is required due to difficulty of predicting a life expectancy and the fact that systems can be rebuilt an a minimal cost, as opposed to being replaced.

Location:	Landscaped areas	General Notes:

Comp #: 1804 Tree - Replacement/Major Maintenance

Observations:

- It is very difficult to predict a replacement cycle for trees as there are several factors such as disease, infestation of insects, heavy snow storms, etc. can all attribute to eventual tree replacement.

Since it is difficult to predict when the replacement will be necessary, Reserve funding is typically not a factor.
 Therefore, unless requested by the association, Reserve funding will not be included as part of the study for this component.

Location:	Common areas	General Notes:

Worst Cost: **\$11,250** Higher estimate for upgraded material

Source of Information: Cost Database

Comp #: 2025 Catastrophic Event

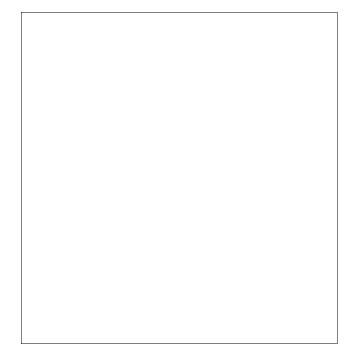

Observations:

This item has been included in this report per the request of the association and its board of directors. Major events that cannot be predicted should not be included in Reserve Studies due to the unpredictable nature of when a catastrophic event will happen and to what extent (the cost involved) the event will cause. All the information in this line item has been provided by the association and no figures were suggested by Aspen Reserve Specialties. Our only suggestion was for this to not be included in a Reserve Study and be treated as a separate issue from Reserves.

	1103	Wader - Resurface	\$11,203	
	1202	Tennis Court - Recoat/Paint	\$89,722	
	1413	Clubhouse - Remodel (Upper Level)	\$121,246	
	1703	Irrigation Timeclocks - Replace	\$10,088	
	1801	Groundcover - Replenish	\$53,348	\$396,813
2038	207	Iron Fencing - Repaint	\$8,252	
	402	Asphalt - Seal Coat/crack fill	\$13,938	
	406	Curb and Gutters - Repair	\$3,698	
	601	Concrete Sidewalks/Decks - Repair	\$86,948	\$112,836
2039	204	Building Ext Surfaces - Repaint	\$12,529	
	908	Access System - Replace	\$15,139	
	1014	Brick - Major Repairs	\$12,085	
	1304	Drinking Fountain - Replace	\$3,393	
	1506	Lower Level Flooring - Recoat	\$5,534	
	1701	Irrigation System - Rebuild	\$28,190	
	1703	Irrigation Timeclocks - Replace	\$10,858	
	2025	Catastrophic Event	\$41,763	\$129,492
2040	1414	Clubhouse - Remodel (Lower Level)	\$70,410	·····
	1801	Groundcover - Replenish	\$59,578	\$129,987
2041	207	Iron Fencing - Repaint	\$9,216	
	402	Asphalt - Seal Coat/crack fill	\$15,565	
	406	Curb and Gutters - Repair	\$4,130	
	601	Concrete Sidewalks/Decks - Repair	\$97,101	
	603	Asphalt Paths - Resurface	\$118,060	
	1111	Pool/Wader Pumps - Replace	\$5,057	
	1122	Pool Furniture - Replace (2)	\$23,376	
	1703	Irrigation Timeclocks - Replace	\$11,688	\$284,194
2042	1001	Wood Fencing - Replace	\$215,884	¢2011101
	1202	Tennis Court - Recoat/Paint	\$107,854	\$323,738
2043	1007	Timber Walls - Major Repairs	\$90,729	T 1
	1113	Pool Cover - Replace	\$35,929	
	1118	Lifeguard Stand - Replace	\$8,166	
	1121	Pool Furniture - Replace (1)	\$13,549	
	1203	Tennis Court Windscreen - Replace	\$26,311	
	1306	Park Furnishings - Replace	\$16,150	
	1703	Irrigation Timeclocks - Replace	\$12,581	
	1801	Groundcover - Replenish	\$66,535	\$269,949
2044	207	Iron Fencing - Repaint	\$10,292	Ψ203,343
	402	Asphalt - Seal Coat/crack fill	\$17,383	
	406	Curb and Gutters - Repair	\$4,612	
	506	Doors/Windows - Partial Replacement	\$16,944	
	601	Concrete Sidewalks/Decks - Repair	\$108,439	
	703	Hot Water Heater Tank - Replace	\$6,275	
	804	Awnings - Replace	\$8,597	
	1014	Brick - Major Repairs	\$14,528

	1801	Groundcover - Replenish	\$82,980	\$430,706

Glossary of Commonly used Words and Phrases (provided by the National Reserve Study Standards of the Community Associations Institute)

Asset or Component – Individual line items in the Reserve Study, developed or updated in the Physical Analysis. These elements form the building blocks for the Reserve Study. Components typically are: 1) Association Responsibility, 2) with limited Useful Life expectancies, 3) have predictable Remaining Life expectancies, 4) above a minimum threshold cost, and 5) required by local codes.

Cash Flow Method – A method of developing a Reserve Funding Plan where contributions to the Reserve fund are designed to offset the variable annual expenditures from the Reserve fund. Different Reserve Funding Plans are tested against the anticipated schedule of Reserve expenses until the desired Funding Goal is achieved.

Component Inventory – The task of selecting and quantifying Reserve Components. This task can be accomplished through on-site visual observations, review of association design and organizational documents, a review of established association precedents, and discussion with appropriate association representatives.

Deficit – An actual (or projected) Reserve Balance, which is less than the Fully Funded Balance.

Effective Age – The difference between Useful Life and Remaining Useful Life. Not always equivalent to chronological age, since some components age irregularly. Used primarily in computations.

Financial Analysis – The portion of the Reserve Study where current status of the Reserves (Measured as cash or Percent Funded) and a recommended Reserve contribution rate (Reserve Funding Plan) are derived, and the projected Reserve income and expense over time is presented. The Financial Analysis is one of the two parts of the Reserve Study.

Component Full Funding – When the actual (or projected) cumulative Reserve balance for all components is equal to the Fully Funded Balance.

Fully Fund Balance (aka – Ideal Balance) – An indicator against which Actual (or projected) Reserve Balance can be compared. The Reserve balance that is in direct proportion to the fraction of life "used up" of the current Repair or Replacement cost. This number is calculated for each component, and then summed together for an association total.

FFB = Replacement Cost X Effective Age / Useful Life

Fund Status – The status of the Reserve Fund as compared to an established benchmark, such as percent funding.

Funding Goals – Independent of methodology utilized, the following represent the basic categories of Funding Plan Goals.

- **Baseline Funding:** Establishing a Reserve funding goal of keeping the Reserve Balance above zero.
- **Component Full Funding:** Setting a Reserve funding goal of attaining and maintaining cumulative Reserves at or near 100% funded.
- **Threshold Funding:** Establishing a Reserve funding goal of keeping the Reserve balance above a specified dollar or Percent Funded amount. Depending on the threshold, this may be more or less conservative than the "Component Fully Funding" method.

Funding Plan – An association's plan to provide income to a Reserve fund to offset anticipated expenditures from that fund.

Funding Principles –

- Sufficient Funds When Required
- Stable Contribution Rate over the Years
- Evenly Distributed Contributions over the Years
- Fiscally Responsible

Life and Valuation Estimates – The task of estimating Useful Life, Remaining Useful Life, and Repair or Replacement Costs for the Reserve components.

Percent Funded – The ratio, at a particular point of time (typically the beginning of the Fiscal Year), of the *actual* (or *projected*) Reserve Balance to the accrued *Fund Balance*, expressed as a percentage.

Physical Analysis – The portion of the Reserve Study where the Component Inventory, Condition Assessment, and Life and Valuation Estimate tasks are performed. This represents one of the two parts of the Reserve Study.

Remaining Useful Life (RUL) – Also referred to as "Remaining Life" (RL). The estimated time, in years, that a reserve component can be expected to *continue* to serve its intended function. Projects anticipated to occur in the initial year have "0" Remaining Useful Life.

Replacement Cost – The cost of replacing, repairing, or restoring a Reserve Component to its original functional condition. The Current Replacement Cost would be the cost to replace, repair, or restore the component during that particular year.

Reserve Balance – Actual or projected funds as of a particular point in time (typically the beginning of the fiscal year) that the association has identified for use to defray the future repair or replacement of those major components in which the association is obligated to maintain. Also known as Reserves, Reserve Accounts, Cash Reserves. This is based upon information provided and is not audited.

Reserve Provider – An individual that prepares Reserve Studies. Also known as **Aspen Reserve Specialties.**

Reserve Study – A budget-planning tool that identifies the current status of the Reserve fund and a stable and equitable Funding Plan to offset the anticipated future major common area expenditures. The Reserve Study consists of two parts: The Physical Analysis and the Financial Analysis.

Special Assessment – An assessment levied on the members of an association in addition to regular assessments. Special Assessments are often regulated by governing documents or local statutes.

Surplus – An actual (or projected) Reserve Balance that is greater that the Fully Funded Balance.

Useful Life (UL) – Also known as "Life Expectancy", or "Depreciable Life". The estimated time, in years, that a Reserve component can be expected to serve its intended function if properly constructed and maintained in its present application or installation.
